

1. GitHub Repository

- Every team must create **one GitHub repository** for its project.
- The repository link must be submitted within the specified deadline.
- Organizers must be added as collaborators if required and repository must be public.

2. Individual Contribution

- Each and every commit must be meaningful
- Every team member must make **at least 2 contributions/commits**.
- Valid contributions may include code, UI/UX, documentation, testing, API/backend integration, database work, or other genuine project work.
- Empty, duplicate, or meaningless commits will not be considered valid contributions.

3. Regular Commits

- Teams should maintain **at least one meaningful commit every 1–2 hours** during development.
- Avoid uploading the entire project through a single final commit.
- Each commit should have a clear and descriptive message.

4. No Last-Minute Repository Dump

- A project uploaded completely near the deadline may be considered insufficiently documented development.
- Judges may inspect Git history to verify development progress and individual contributions.

5. Branching

- For teams using multiple developers, separate branches may be used for major features.
- Completed features should be merged into the main branch.
- The **main** branch should contain a stable version of the project.

6. Documentation

- Every project must contain a **README.md** covering: problem statement, proposed solution, features, technology stack, system architecture, APIs, database, setup instructions, **how to run the project**.

7. Working Prototype

- The submitted project must contain a **functional prototype/MVP**.
- A presentation or mockup alone will not be considered a complete technical submission.
- Core features mentioned in the presentation should be demonstrable.

8. Build & Run Instructions

- The project should be reproducible on another system.
- Provide installation commands, dependencies, environment setup, database setup if applicable, and run/build commands

9. API & Third-Party Services

- All external APIs, libraries, datasets, and frameworks must be clearly mentioned in the documentation.
- Teams are responsible for complying with relevant API/library licenses and terms
- If an API requires a key, do not upload the key to GitHub.

10. Secrets & Credentials

- **Strictly prohibited:** API keys, passwords, database credentials, access tokens, and private keys in source code or GitHub
- Use a **.env** file for secrets and provide an **.env.example** file where appropriate.

11. AI Tools

- Teams should clearly disclose significant use of AI-generated code/content in their respective ppts.
- Team members must understand and be able to explain the code they submit.

AI-generated material should not be presented as entirely original team work.

12. Plagiarism / Existing Projects

- Directly copying an existing project and presenting it as original work is prohibited.
- Do not misrepresent an existing dataset or model as one developed by the team.
- Teams should identify which components are original and which are third-party.

13. Version Freeze

- At the submission deadline, the GitHub repository will be considered **frozen for evaluation**.
- Changes made after the deadline will not be considered unless explicitly permitted by organizers.

14. Final Submission

- Each team must submit the GitHub repository, README.md, presentation/PPT, demo or deployment link where applicable, project documentation, and demo credentials if required.

15. Deployment

- If the project has a web, mobile, or backend component, provide a working deployment/demo link whenever possible.
- The deployment should remain accessible during evaluation.
- If login is required, provide demo credentials to judges.

16. Testing

- Teams should test core functionality before submission.
- At minimum, verify the main user flow, input validation, API connectivity, database operations, error handling, and responsiveness where applicable.

17. Technical Presentation

- Teams should be prepared to explain: **Problem** → **Architecture** → **Technology** → **Implementation** → **Demo** → **Results**.
- Judges may ask technical questions about architecture, algorithms, databases, APIs, security, scalability, AI/ML methodology, and individual contributions.

18. Technical Verification

- Organizers/judges ask team member to explain the portion they contributed.
- This may include demonstrating the functionality and explaining the implementation.

Recommended Core Evaluation Rule

Judges may inspect the GitHub repository, commit history, documentation, deployed application, source code, and individual contributions. Each team member may be asked to explain their contribution and demonstrate its functionality. Failure to demonstrate or explain a claimed contribution may result in the contribution not being considered during evaluation.

Quick Compliance Checklist

✓	GitHub repository created and submitted on time
✓	At least 2 meaningful contributions from every member
✓	Regular, descriptive commits maintained
✓	README.md and setup documentation included
✓	Working prototype/MVP available
✓	APIs, libraries, and datasets disclosed
✓	No API keys, passwords, or credentials committed
✓	AI-assisted work disclosed where required
✓	Third-party/open-source components acknowledged
✓	Repository frozen at submission deadline
✓	Demo/deployment and backup plan prepared
✓	Every member can explain their contribution or one member can explain the whole [roject if said by judges.

FINAL SUBMISSION & EVALUATION

Final submission is followed by a shortlisting round and a face-to-face technical evaluation.

01

FINAL PROJECT VIDEO

- Submit the final project demonstration video strictly by 12:00 PM.
- Upload/submit the video using the provided Google Drive submission link.
- The video must clearly demonstrate the final working project and its core functionality.

02

VIDEO DURATION

- The demonstration video must not exceed 5 minutes.
- Keep the demonstration focused on the working product, key features, and final outcome.
- Ensure the video is accessible and playable before submission.

03

SHORTLISTING & FINAL EVALUATION

- After the submission deadline, judges will shortlist the Top 6 teams.
- The Top 6 teams will undergo face-to-face evaluation with the judges.
- The evaluation will include a live demonstration followed by technical Q&A.

04

WINNERS 🏆

- From the Top 6 shortlisted teams, the judges will select the Top 3 teams as the final winners based on their final demonstration, technical evaluation, and responses during the Q&A.
